Southern blot analysis of human genomic DNA and a panel of human/rodent somatic cell DNAs revealed at least 3 Cdn-related genes residing on chromosomes 6, 11 and 20. Cdn-3 (R77878) and an octon the structural features of Cdn-1 (R77876), Cdn-2 (R77877) or othat Bcl-2 family members.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PPR PET HE PROPERTY AND PROPERT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This Bak-2 protein sequence represents a bol-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; 095492.
New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1; Gaps

Cdn-1 cDNA was isolated from a human heart cDNA library using a Cdn-1 cDNA was isolated from a human heart cDNA library using a proviously isolated clone as probe. Recombinant Cdn-1 was produced in $f9 and human colon adenocarcinoma HT29 calls. Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cdn-1; apoptosis modulator; adoptive immunotherapy; therapy; HIV; autoimmune disease; reperfusion injury; hepatitis, osteoporosis; shock; lymphoma; eczema.

This Bak protein sequence represents a bcl-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compounds which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; Q95493.
New nucleic acid sequences encoding Cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                             Claim 3; Fig 4; 100pp; English.

BC1-Y protein (R81451) is a member of the BC1-2 family and can induce apoptosis in cells and function as a negative regulator of BC1-2 function.

BC1-2 function.

BC1-2 function.

BC1-2 function.

BC1-2 function.

BC1-2 function all human tumour cell lines examined and is also widely expressed in primary human tissues. It can be obtd. by expression of a full-lingth connocione (T17375) in pref. mammalian host cells.

BC1-Y can be used to develop prods. for treating disorders associated with inappropriate cell proliferation or cell death, and to raise antibodies used for sequence 211 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Disclosure; Fig.5D-E; 66pp; English.
Cdn-2 cDNA was isold. from a human placental genomic library using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (R77876).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               R03928 standard; Protein; 647 AA.

Disclosure; Fig 2.1-2.14; 86pp; English.

Fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M.Hyopneumoniae (Mhyhsp70 - R03922);
2. Bacillus megaterium (Bmehsp70 - R03923);
3. E. coli (dnaK - R03924);
4. T. cruzi (R03926);
5. T. cruzi (R03926);
6. Rat rattus (rathsp70 - R03927);
7. Xenopus laevis (x170 - R03928);
8. Homo sapiens (humhsp70 - R03929);
9. Gallus gallus (chkhsp70 - R03930);
10. Zea mays (mzehsp70 - R03931);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                           Proteins homologous to heat shock proteins from Trypanosoma cruzi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11. Serratia marcescens (smahspio - R03932).
The proteins having homology to hsp's of T. cruzi can be used in accines and diagnosis involving e.g. Trypanosoma, Mycoplasma and Mycobacteria species.

Human interleukin-I-converting enzyme-like apoptosis protease-3. 
ICE-LAP-3; interleukin-I-converting enzyme-like apoptosis protease; enzyme; Alzheimer's disease; Parkinson's disease; septic shock; head injury; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Numan ICE-LAP-3 and -4 DNA and protein - useful in the diagnosis and treatment of Alzheimer's disease, Parkinson's disease, rheumatoid arthritis, septic shock and head injury claim i, Page 91-92; 67pp; English.

This ICE-LAP-3 protein may be used therapeutically, e.g. as an antitumor or antiviral agent and to control embryonic development and tissue homeostasis. The protein can also be used to treat immunosuppression disorders, such as AIDS, by targeting virus infected cells for cell death. The DNA may find use in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match 12.6%; Score 81; DB 18; Length 341; Best Local Similarity 40.0%; Pred. WITH VALIDS AND AUGOGUUS to heat shock proteins from Trypanosoma cruzi - used no vaccines and diagnosis for species of eq Mycoplasma or Mycobacteria. Fig 21-21-214; 86pp; English.

Discloaure; Fig 2.1-2.14; 86pp; English.

According to the legend of Fig 2, the G gallus HSP sequence has 535 amino acid residues, the sequence itself has only 634,

Including "O" (?) at position 634.

Including "O" (?) at position 634.

C fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M.hyopneumoniae (Mhyhsp70 - R03922);

C 2. Bacillus megaterium (Bmehsp70 - R03923);

C 3. E. coli (dnaK - R03924);

C 4. T. cruzi (R03926);

C 5. T. cruzi (R03926);

C 6. Rat rattus (rathsp70 - R03929);

C 7. Xenopus laevis (x170 - R03929);

C 8. Homo sapiens (humhsp70 - R03929);

C 10. Zea mays (mzehsp70 - R03932);

C 11. Serratia marcescens (smahsp70 - R03932);

C 12. Serratia marcescens (smahsp70 - R03932);

C 13. Serratia marcescens (smahsp70 - R03932);

C 2. Vaccines and diagnosis involving e.g. Trypanosoma, Mycoplasma and contents and

protein sequences (Talm 1) Page 8-9; 13pp; Japanese.

The enzymes (R66729-34), encoded by genes 079907-12, are involved in the synthesis of dihydrodiol and catechol compounds by microbial fermentation in E.coll at normal temps. and pressures from aromatic Phydrocarbons.

The sequence presented here its of an aromatic deoxygenase of 459 amino acids. The aromatic dihydrodiol can be used as a raw material for engineering plastics and the catechol compound is used as a polymerisation inhibitor of synthetic resin and as an intermediate in drug synthesis.
02-0CT-1995 (first entry)
Aromatic dihydrodiol/catechol deoxygenase #1.
Dihydrodiol; catechol; microbial fermentation; E.coli; aromatic;
deoxygenase; hydrocarbon; engineering plastic; polymerisation inhibitor;
synthetic resin; drug synthesis.
Pseudomonas fluorescens SD805.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                             developing prods. for studying calcium channels, e.g. for obtaining agonists and antagonists.

The primary prods. for studying calcium channels, e.g. for obtaining agonists and antagonists.

Claim 34: Page 178-190; 285pp; English.

The primary transcelpt of the alpha 1A subunit gene is alternatively spliced to yield at least two variant mRNAS.

One form, alpha 1A-1 is given in Q84659/R71008. Alpha 1A-2 differs from alpha 1A-1 is given in Q84659/R71008. Alpha 1A-2 differs from alpha 1A-1 encoding sequence at the 3' end in that it lacks a first sequence. This deletion shifts the reading frame and introduces a translation termination codon resulting in an alpha 1A-2 coding sequence that encodes a shorter alpha 1A subunit than that encoded by alpha 1A-1. DNA doncding alpha 1A subunit than that encoded by alpha 1A-1. DNA doncding alpha having sequence Q84661, Q85559 or Q84660 or DNA encoding an alpha the phage lysate of an E. coll host contg. DNA encoding an alpha 1A-2 bunit that has been deposited in the ATCC under accession no. 75293.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Fig 2; 30pp; English.

Overlapping clones, which make up the cDNA sequence from which this sequence was deduced, were isolated from a murine PBL cDNA library prepared in lambda gt10. The purified protein can mediate the cytolytic activity of mammalian cells. It specifically distinguishes tumour cells making it a candidate for the development of products for the immunodetection and immunotherapy of tumours.
                                                                                                                                                                                                                        Gaps

In HSV-1, 4 intron-less open reading frames (ORFS) are present within the sequence specifying the L/ST junction-spanning transcript. ORPI-4 are given in Q76209-12, and encoded proteins in R64327-30. Antibodies raised against such proteins may be used to identify therapeutic agents. Sequence 233 AA;

```
prods. for the immuno-detection and immuno-therapy of tumours Disclosure; Fig 1; 30pp; English.
Overlapping clones, which make up the cDNA sequence from which this sequence was deduced, were isolated from a cDNA library prepared from human NK calls purified from human peripheral blood. The purified protein can mediate the cytolytic activity of mammalian calls. It specifically distinguishes tumour cells making it a candidate for the development of products for the immunodetection and immunotherapy of tumours. See also Q13115.

Mean 37.327; Variance 80.459; scale 0.464 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

##residues
81-120 ##sressed constitutively in occytes, disappears
NT This protein is expressed constitutively in occytes, disappears
after fertilization, and is induced by heat shock in somatic
cells from the gastrula stage onward.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -I- FUNCTION: IN COOPERATION WITH OTHER CHAPRENGES, HSP70S STABILIZE PRESESSESTION AND MEDIATE THE FOLDING OF NEWLY TRANSLATED POLYPEPTIDES IN THE CYTOSOL AS WELL AS WITHIN OR ANGANELES. THESE CHAPRENONES PARTICIPATE IN ALL THESE PROCESSES CC OTHER PROTEINS. THES HOND EXCENSED PROTOFORMATIONS OF TYRONGCH THEIR ABILITY TO RECOGNIZE NONNATIVE CONFORMATIONS OF OTHER PROTEINS. THESE STANSLODED PEPTIDE SEGMENTS WITH A NET CONFORMATION OR FOLLOWING STRESS-INDUCED DAMAGE.

CC -I- SIMILARITY: BELONGS TO HEAT SHOCK PROTEIN 70 FAMILY.

-I- FUNCTION: SSA2 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES
BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE
ENOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST
SSA1 AND SSA2 PROTEINS IS EXPECTED. SSA2 CAN PARTICIPATE IN THE
ATP-DEPRINDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

-I- FUNCITON: AFRECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH ACTIN-BINDING PROTIEN CAPP32/34. ACTS AS A CHAPERONE BY STIMULATING THE REFOLDING OF DENATURATED CAP32 AND CAP34.

-I- SUBCELLULAR LOCATION: CYTOPLASMIC. FOUND IN F-ACTIN-RICH REGIONS COF THE CELL CORTEX AND CELL PROTRUSIONS.

-I- DEVELOPMENTAL STAGE: HEAT SHOCK COGNATE PROTEINS ARE EXPRESSED CONSITIUTY VELY DURING NORMAL DEVELOPMENT.

-I- SIMILARITY: BELONGS TO HEAT SHOCK PROTEIN 70 FAMILY.

SUBMITTED (SEP-1994) TO THE SWISS-PROT DATA BANK.
-!- FUNCTION: SSA1 MAY PLAY A ROLE IN THE TRANSPORT OF POLYPEPTIDES BOTH ACROSS THE MITOCHONDRIAL MEMBRANES AND INTO THE ENDOPLASMATIC RETICULUM. A FUNCTIONAL DIFFERENCE BETWEEN YEAST SSA1 AND SSA2 PROTEINS IS EXECTED. SSA1 CAN PARTICIPATE IN THE ATP-DEPENDENT DISASSEMBLY OF CLATHRIN-COATED VESICLES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

ALIGNMENTS

Compounds which This Bak protein sequence represents a bcl-1 homologue which inties Bak protein sequence represents a bcl-1 homologue which interacts with Epstein Barr virus (EBV) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which hibbit the interaction may be used as virucide, antitumour or an antibody; Human; Bak; apoptosis; latency; virus replication; Epstein: Barr virus; BHRF1; fusion protein; epitope tag; drug screening; co-precipitation; ELISA; immunoassay; antibody; protein interactive trapping; virucide; antitumour; diagnostic. Screening for anti-viral agents - by detecting the ability of agent to disrupt the interaction of a Bak protein and a viral T 1 W03668 standard; Protein; 211 AA. 19-APR-1996; U05639. 20-APR-1995; US-426529. New isolated human Bcl-Y protein - used to develop prods. for
treating disorders characterised by inappropriate cell proliferation
or cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 masgagpppprqecgepalpsaseeqvaqdteevfrsyvfyrhqqeqeaegvaapadpem 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 3; Fig 4: 100pp; English.

Bcl-Y protein (R81451) is a member of the Bcl-2 family and can induce apoptosis in cells and function as a negative regulator of Bcl-2 function. Bcl-Y mRNA was detected in all human tumour cell lines examined and is also widely expressed in primary human tissues. It can be obtd. by expression of a full-length cDNA clone (T1735) in pref. mammalian host cells. Bcl-Y can be used to develop prods. for treating disorders associated with inappropriate cell proliferation or cell death, and to raise antibodies used for the diagnosis or monitoring of such disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

New nucleic acid sequences encoding cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                                                                             Disclosure; Fig. 3A-B; 66pp; English.

Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcinoma HT29 cells. Expression of cdn-1 in WT-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels 1; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 etc.
Disclosure; Fig.5D-E; 66pp; English.
Cdn-2 cDNA was isold. from a human placental genomic library
using a 950 bp fragment of Cdn-1 cDNA. Expression of Cdn-2
in mouse progenitor B-cell Fi5.12 cells decreased IL-3-induced
appropsis. The Cdn-2 protein displayed 97% amino acid identity
with Cdn-1 (R7/876).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Fig.11; 66pp; English.

Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 sequence 152 AA;

New poly-nucleotide encoding new poly-peptide(s) that modify apoptosis - and related vectors, recombinant cells and antibodies, useful in assay and for control of cell death in e.g. neuronal cells, lymphocytes and cancers claim 4; Page 87; 127pp; English.

This protein may be expressed recombinantly, particularly with pcmV plasmids as vectors for expression in mammalian cell cultures.

The protein has particular application in cancer cells (failure of programmed cell death (PCD)) or neurodegenerative and autoimmune diseases (premature PCD), e.g. Parkinson's disease, amylotrophic lateral sollerosis and multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120 eqvvnelfhdgvnwgrivaffsfggalcvesvdkemrvlvgrivswmttyltdh-ldpwi 178

Nucleic acids encoding apoptosis regulating proteins - useful for diagnosing and treating immune disorders, malignancies, etc.
diagnosing and treating immune disorders, malignancies, etc.
Example 8; Page 34.35; 60pp; English.
The 80-6 mutant (W01020) of the bcl-2 oncogene product (W01018) lacks amino acids 80-86 of the native protein. This and other Bcl-2 mutants (see also W01019-21) were used in a two hybrid assay to examine the interactions between Bcl-2 and novel apoptosis-regulating proteins Nipl, Nip2 and Nip3 (W00997-99). 2 Motifs (W01003-04) on Bcl-2 were identified that are essential for interaction with the Nip proteins. These motifs show homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Apoptosis-blocking protein Bc1-2 mutant 80-6 (de180-86).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 mlghlgptaenayeyftkiatslfesginwgrvvallgfgyrlalhvyghgltgflggvt 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid sequences encoding cdn apoptosis modulators - and related vectors, transformed cells, proteins and antibodies, useful or diagnosis and treatment e.g. of HIV infection, reperfusion injury
                                                                                  Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Res-mediated apoptosis. Deletion of the N-terminal 70 amino acids of Cdn-1 improved this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                                                                                                                                                                                                                                                 Indels 1; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Fas mediated apoptosis. Truncated Cdn-1 derivatives given in R77879-81 were used to test the effects of deleting the N-terminal sequences of Cdn-1 on this activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 rfvvdfmlhhciarwiaqrggwvaalnlgngpilnvlvvlgvvllgqfvvrrffks 116

Inducting or preventing death of T cells by bcl-XL protein regulation

"used to increase survival of HIV infected cells or to
down.regulate immune responses in immune diseases

Disclosure; Page 52-53; 76pp; English.

This is the sequence of a human bcl-XL protein, which protects
T-lymphocytes against cell death. A splice variant form, bcl-XS,
lacks a stretch of 63 amino acids, and is a dominant negative
regulator of 6bcl-XL function. The gene may be modified to
facilitate interaction with costimulatory Bax protein and inhibit
interaction with antagonistic Bad protein, by modification of the
Bcl-2 homology domains BHI and/or BH2. The bcl-XL gene may be
controduced into T-cells in vivo or ex vivo via gene transfer using
a vector for HIV infection gene therapy, to augment intracellular
continuous interaction and protect from cell death. A corresponding
antisense oligonuclectide or expression vector may be used in gene
therapy of e.g. autoimmune disease, graft rejection or graft.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 dspavngatghs-ssldarevipmaavkqalreagdefelryrrafsdltsqlhitpqta 119

This protein may be expressed recombinantly, particularly with pcmV plasmids as vectors for expression in mammalian cell cultures. The protein has particular application in cancer cells (failure of programmed cell death (PCD)) or neurodegenerative and autoimmune diseases (premature PCD), e.g. Parkinson's disease, amylotrophic lateral sclerosis and multiple sclerosis.

                                                                     diagnosing and treating immune disorders, malignancies, etc.

Example 8; Page 33-34; 60pp; English.

The 42-8 mutant (Wollo19) of the bcl-2 encogene product (Wollo18)

Lacks amino acids 42-48 of the native protein. This and other

Bcl-2 mutants (see also Woll020-21) were used in a two hybrid assay

to examine the interactions between Bcl-2 and novel apoptosis-

requiating proteins Nipl. Nipl and Nipls (WO0997-99). The Nip

proteins were unable to interact with mutant 42-8. The site of

deletion in this mutant corresponds to a motif (see also Woll003)

C blinding motif (Woll004) of Bcl-2 was also identified, and both

show homology to motifs (Woll005-06) found on the 19K protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           125 tvvoelfrdgvnwgrivaffefggvmcvesvnremsplvdnialwmteylnrh-lhtwig 183

3. Example 8; page 32-33; 60pp; English.

The bol-2 oncogene product (W01018) enhances the survival of haematopoietic B and T cells by blocking apoptosis induced by Chicage agents. Its activity is similar to that of the 19K protein (W01010) of adenovirus Elb. 3 Novel proteins, Bipla, Elb. 3 Novel proteins, Bipla, Bipla, and Bip5 (W01000-02), that specifically interact with Elb. 3 howes the apoptosis-regulating Nup proteins (see also W01019-21) shows the apoptosis-regulating Nup proteins (see also W01019-21) shows the apoptosis-regulating Nup proteins (see also W01019-31) shows the apoptosis-regulating Nup proteins (see also W01013-04) that show homology to motifs (W01005-06) on 19K.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tpaapgaaagpalspvppvvhlt--lrqagddfsrryrrdfaemssglhltpftargcfa 124

While you producing and identifying mutant bel-2 proteins -
that lack death repressor activity and/or lacks binding to Bax.

PD Soloclosure; Page 40; 133pp; English.

Ensemble of the proteins respectively. bel-2 is encoded by a prote-oncogene and is capable of inhibiting apoptosis in many hematopoietic cell systems.

CC bel-2 is a 26 kn membrane-associated cytoplasmic protein and is thought to function by enhancing the survival of hematopoietic cells of B and T co function by enhancing the survival of hematopoietic cells of B and T co rigins rather than directly promoting proliferation of these cell cytoplasmic protein and is thought cc origins rather than directly promoting proliferation of these cell cytoplasmic protein by enhancing the survival of hematopoietic cells of B and T correston nor does it necessarily alter the dose reponse to limiting concentrations of IL-3. bel-2 has been shown to form heterodimers with a protein, Bax. Overexpressed Bax accelerates apoptotic cell death concentration of between bel-2 and Bax determines cell survival or death of callowing an apoptotic stimulus. The invention gives a mutant form of following an apoptotic stimulus. The invention gives a mutant form of concentration of bel-2 in which there is at least one amino acid substitution or deletion in the BHI or BH2 domains. This makes the mutant protein substantially concentral and aliminaring and promose in animinarium service bown regulation of bel-1 is useful in cancer therapy, controlling hyperaple of hinding an apoptory and promose in animinarium services and animinarium service concentration of persons activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hyperplasts and eliminating self-reactive clones in autoimmunity by favouring death effector molecules. Up regulating bcl-21s beneficial in treatment and diagnosis of immunodeficiency diseases, including AIDS and neurodegenerative and ischaemic cell death.

C -1- FUNCTION: DOWINANT REGULATOR OF APOPTOTIC CELL DEATH.
C -1- FUNCTION: DOWINANT REGULATOR OF APOPTOTIC CELL DEATH.
C -1- TISSUES PECIFICITY: BCL.X(S) IS EXPRESSED AT HIGH LEVELS IN CELLS
C THAT UNDERGO A HIGH RATE OF TUNOVER, SUCH AS DEVELOPING
LLONG-LIVED POSTMITOTIC CELLS, SUCH AS DEVELOPING
C LONG-LIVED POSTMITOTIC CELLS, SUCH AS ADULT BRAIN.
C -1- SIMILARITY: BELONGS TO THE BCL.2 FAMILY.

HOCKENBERY D., NUNEZ G., MILLIMAN C., SCHREIBER R.D., KORSMEYER S.J.;
NATURE 348:334-336(1990).

-!- FUNCTION: PROLONGS THE SURVIVAL OF HEMATOPOIETIC CELLS IN THE
ABSENCE OF REQUIRED GROWTH FACTORS AND ALSO IN THE PRESENCE OF
VARIOUS STIMULI INDUCING CELLULAR DEATH. BLOCKS APOPTOSIS. MIGHT
FUNCTION IN AN ANTIOXIDANT PATHWAY TO PREVENT APOPTOSIS AT SITES
OF FREE RADICAL GENERATION SUCH AS MITOCHOURIA.
-!- SUBCELLULAR LOCATION: MITOCHOURIAL INNER MEMBRANE.
-!- TISSUE SPECIFICITY: EXPRESSED IN A VARIETY OF TISSUES.
-!- DISEASE: INVOLVED IN FOLLICULAR LYMPHOMA (FL) (ALSO KNOWN AS TYPE
II CHRONIC LYMPHATIC LEUKEMIA) BY A CHROMOSOMAL TRANSLOCATION
T(14.18)(032;021) WHICH INVOLVES BCLZ AND IMMUNOGLOBULIN GENE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       74 tpaapgaaagpalspvppvvhlt--lrqagddfsrryrrdfaemssqlhltpftargrfa 131
